

BEFESA

PRESS ANNOUNCEMENT

Befesa presents the awards ceremony for its Charity Project Contest

Befesa held the awards ceremony for its Charity Project Contest in September, in the winning organizations in Seville and Barcelona.

During the ceremony of the first prize for the project "Social Robotic Rehabilitation" of the Spanish Association of the Effects of Cancer Treatment, we met the robot "Curro", which helps doctors to detect the problems appearing in the children after cancer treatment. In addition, "Curro" reinforces the rehabilitation process in a fun way playing with words, telling stories, with memory games, and even dancing with the children.

The second prize for the program "Parem Taula" of the project "Rebost Solidari" was delivered at the facilities of the Nou Quixalles Educational Association, where we could see the work behind the project to ensure at least one complete and nutritive meal a day for the youth living in extreme poverty, as well as the classrooms where they offer emotional and school support, among others, to these young students.

These awards ceremonies help us to better understand the organizations, the human capital supporting them, and all the projects that they are working with.

Befesa thanks again to all the people involved in each project, as well as the employees who presented them in the Charity Project Contest.
